

RELAX- We give painless injections

May 15, 2012

Let's face it, nobody likes dental shots. No matter how old you are. This is why most people don't go to the dentist as often as they should. And if you're one of those people who hate dental shots, we've got great news for you.

Dr. Schwartz now has DentalVibe. A patented, award winning device invented by a dentist that uses vibration to block the sensation of pain. So when you get a shot, you don't feel it. DentalVibe is gentle. Fast. And safe. There are no pills to take, no gas to inhale, no drowsy after-effects to worry about.
